

What's New: Digital Order System

Quick Guide for Team Members

This replaces your Google Sheet. Order entry works the same, but now with automated payments, review requests, and order tracking.

1. Payment Processing (New!)

Instead of manually tracking payments, the system processes them automatically:

Credit Card (Stripe):

- Select "Credit Card" payment method
- Enter card details directly (works like a card terminal)
- Payment processes immediately when you create order
- Card form clears after each transaction (prevents duplicate charges)

PayPal Invoice:

- Select "PayPal Invoice" (no payment needed at order creation)
- After creating order, go to order detail page ! "Send PayPal Invoice"
- Customer gets email with payment link
- System updates balance automatically when they pay

Cash/Check:

- Select "Cash" or "Check" and enter amount received
- System tracks balance if partial payment

Partial Payments:

- Take deposits at order creation, collect balance later
- From order detail page: "Collect Payment" button
- All payments tracked automatically

2. Google Review Requests (New!)

Send review requests to build online reputation:

After creating order:

- Click "Request Google Review" button (right on the order form)
- System sends email + SMS with review link
- Customer gets frictionless review request

Or from order detail page:

- Navigate to any order ! "Request Google Review"
- Customer info pre-filled

Ø=Ü; Tip: Send both email and SMS for best response rate. Always get SMS consent first.

3. Order Management System (New!)

All orders saved automatically. No more lost spreadsheets.

Order List (Navigate to "Orders"):

- Search by customer name, email, or order ID
- See payment status at a glance (Paid/Unpaid/Partial)
- Click any order to view details

Order Detail Page:

- View complete order specs and pricing breakdown
- See payment history
- Collect additional payments
- Send PayPal invoices
- Request Google reviews
- Download PDF for production

4. Automated Features (Background)

These happen automatically - you don't need to do anything:

- ' Real-time pricing updates as you enter order details
- ' Email confirmations sent when orders created
- ' Paid orders sync to ShipStation automatically
- ' PayPal payments update order balance via webhooks
- ' Balance tracking for partial payments

Workflow Comparison

OLD (Google Sheet):

1. Fill out spreadsheet row
2. Manually calculate pricing
3. Process payment externally
4. Update spreadsheet with payment status
5. Email customer manually
6. Hope they leave a review

NEW (Digital System):

1. Enter order details (pricing calculates automatically)
2. Process payment (credit card/PayPal/cash) in same screen
3. Click "Request Google Review"
4. Done. System handles: email, ShipStation, tracking

Key Differences from Google Sheet

- ' Payments process in-app (no external terminals/manual tracking)
- ' PayPal invoices send with one click (automatic payment tracking)
- ' Google review requests via email + SMS (builds reputation)
- ' All orders searchable/retrievable (no more scrolling through sheets)
- ' Partial payments tracked automatically (no manual math)
- ' ShipStation sync (paid orders appear automatically)

Everything else works the same: enter frame specs, select mats, add services

Questions? Ask your system admin or refer to the full manual.
